

Exhibitor Booklet

2015 Northern California Clean Technology Forum

Sacramento Clean Cities is part of a Department of Energy sponsored program designed to reduce our nation's petroleum consumption by advancing the use of alternative fuels and vehicles. Clean Cities' mission is to draw local stakeholders from both government and industry to create a forum for members to leverage their resources, develop joint projects, collaborate on public policy issues, and promote alternative fueled vehicles in their respective communities. To accomplish this mission, the coalition holds multiple workshops every year in the Greater Sacramento Region to educate fleet operators about the benefits of converting to alternative fuels and to keep them updated about new vehicle technology. The coalition consists of public and private fleet operators and serves Sacramento, Placer, El Dorado, Yolo, Solano, Yuba, Butte and Sutter counties. Members benefit from funding opportunities, access to information about new vehicle technology, and opportunities for national public exposure.

EXHIBITORS

Air Products makes large quantities of hydrogen for petroleum refiners to lower the sulfur content of their gasoline and diesel fuels. This lets them meet clean air regulations.

Air Products is also a leader in hydrogen fueling infrastructures, helping to build the hydrogen economy of the future. They've also been the main player in another clean fuel area, liquefied natural gas (LNG). They remain a global leader in air separation plants, hydrocarbon recovery and purification equipment, and helium distribution equipment.

Altergy Systems designs and manufactures the Freedom Power™ Series of fuel cell power systems. These compact, rugged, high efficiency systems produce power at the point of use — making reliable, distributed power generation a reality.

Light towers, on-site power, telecommunications, emergency response, data centers, and other mission-critical applications benefit greatly from the silent, zero-emission, uninterrupted, on-demand power made possible by Altergy's innovative fuel cell systems.

Altergy's patented and validated technology breaks critical fuel cell barriers and shifts not one but three existing paradigms: the perception that all fuel cells are expensive; how fuel cells are designed, manufactured and used; and, of greatest significance, how the 21st century world will be powered. Not only are Altergy's products rugged and reliable, they can be cost-effectively mass produced.

Autocar is the only American truck manufacturer focused on trucks for severe-duty vocational applications. But above all, Autocar is focused on our customers: We don't just build trucks, we provide a complete tool - a whole system - that helps our customers to be more successful and to achieve their challenging objectives.

With a steady stream of innovations ranging from improved ergonomic cabs, enhanced safety and productivity, and unsurpassed body-chassis integration, Autocar has staked out a position as the industry's technology and innovation leader.

Our slogan, "Always Up®" isn't just some fancy promise – it's a state of mind. Always Up means we work intimately with our customers so that every single one of our trucks is purpose-built to fit the specific needs of their business and stay in service. Always Up also means our Autocar Solutions® 24/7 service command center solves our customers' technical issues and coordinates our network of hundreds of authorized Autocar service locations across the United States and Canada.

Toyota, the world's top automaker and creator of the Prius, is committed to building vehicles for the way people live through our Toyota, Lexus and Scion brands. Over the past 50 years, we've built more than 25 million cars and trucks in North America, where we operate 14 manufacturing plants (10 in the U.S.) and directly employ nearly 40,000 people (more than 37,000 in the U.S.). Our 1,800 North American dealerships sold more than 2.3 million cars and trucks in 2012 – and about 80 percent of all Toyota vehicles sold over the past 20 years are still on the road today.

Toyota partners with philanthropic organizations across the country, with a focus on education, safety and the environment. As part of this commitment, we share the company's extensive know-how garnered from building great cars and trucks to help community organizations and other nonprofits expand their ability to do good.

Since day one, TruStar Energy understood that it needed to be flexible in how it brought CNG to its customers.

Customers needed options – from the type of station they needed – to the amount of fuel they needed – to how the station would be funded. TruStar Energy's

transparent approach to CNG puts the owner in the driver's seat by offering realistic options. In short, you tell us what your CNG fueling strategy needs to look like and TruStar Energy will work to develop a model that dovetails with your business model.

No cumbersome contracts steeped in 'techno babble,' no 'first right of refusal' demands to lock you in on subsequent station builds. No excuses. Whether you want to own and operate your own station, want us to, or simply need us to provide you with long-term fuel access, TruStar Energy is equipped handle your needs. True Partnership. For a Change. It's not merely a tag line... it's how we run our business.

rstrange@trustarenergy.com

USA Fleet Solutions GPS/Telematics offers the best in class technology with the commitment to help you use the data to drive decisions. Our fleets rely on our ability to go beyond delivering data and lean on our expertise in how to use the data.

Some in the telematics industry show you how to run reports but stop at the critical need to explain what it means and how you can use it. We can deliver customized data analysis for fleets. Our product is approved by the California Bureau of Auto Repair for the Continuous Smog Test Program saving you thousands of dollars and valuable labor costs.

VIA's eREV powertrain is ideal for America's fleets, cutting fuel costs by up to 75%, while dramatically reducing petroleum consumption and emissions.

Recharging daily, the average driver could expect to refill the gas tank less than 10 times a year rather than once a week. It offers all the advantages of an electric vehicle, without range limitations. Working with vehicle manufacturers, VIA is now delivering eREV trucks to government and utility fleets.

Zonar provides electronic fleet inspection, tracking and operations solutions for public and private fleets. Zonar is a privately held company headquartered in Seattle, Washington.

INSPECT • TRACK • KNOW

Zonar built the first Electronic Vehicle Inspection Report (EVIR) system revolutionizing how pre- and post-trip inspections, mandated by state and federal law, are conducted by commercial and private fleets. Today, it has grown into a comprehensive high-return telematics platform providing an expansive set of solutions that remains simple to use.
